XRAM Acc No: C94-051598
  Prodn. of highly stereoselective beta-lactam deriv. - by
  reacting lithium enolate of organic ester with imine coordinated with
  trialkyl-aluminium in THF
Patent Assignee: TOYO STAUFFER CHEM YG (STAU ); TOYO STAUFFER CHEM (STAU

Abstract (Basic): JP 6056770 A
```

Beta-lactam deriv. is obtd. by reaction of a lithium enolate of an organic ester with an organic imine cpd. An imine coordinated with a trialkylaluminium is used as the organic imine cpd. and the reaction is

ADVANTAGE - The prod. is prepd. with high selectivity.

In an example, 12 mmol. of n-butyl lithium (15% hexane soln.) was added to 7 ml. of n-hexane soln. of 12 mmol. diisopropylamine while ice-cooling under N2 stream. The mixt. was stirred for 30 min. and then n-hexane was distilled off in vacuo. 5 ml. THF was added to the residue and the mixt. was cooled to (-) 78 deg.C. 10 mmol. Of ethyl isobutyrate was added in 3 minutes and then THF soln. of 10 mmol. C6H5CH=NC6H5 and THF soln. of 10 mmol. Aluminium tri-acetate were added. The mixt. was heated gradually to room temp. in 2 hrs. It was hydrolysed with 1N HCl and the hydrolysate was extracted by benzene. Benzene was distilled off to give the beta-lactam. The yield was 75% and the cis-trans ratio was 100:0.

Dwg.0/0

carried out in THF.
